

Vision

Monohakobi means quality transport and logistics. MTI dedicates Monohakobi technology and expertise to satisfying customers' needs and making our Earth a better place to live.

About MTI

We have achieved great success by taking advantage of being close to customer needs, by acquiring information and knowledge of state-of-the-art technical seeds, and by integrating the needs and seeds appropriately and innovatively.

The main fields for us are vessel operation, safety, environment, energy saving, and new logistics technologies. We consider our mission is to provide optimum solutions for such various fields.

Business Areas

- Research and development of environmental conservation and energy-saving technology
- Research and development of vessel-operating technology
- Research and development of vessel-operating information technology
- Research, development, and consultation on quality transport
- Research, development, and provision of logistics solutions
- Investigation and research of new businesses, including ocean business
- Earthquake-resistance test and vibration test of transportation equipment and cargo shipping
