

Vision

MTI brings together the technical expertise and human resources of both marine transportation and logistics as it contributes to realizing customers' needs, safeguarding the global environment, and improving human life.

Mission

As a member of the NYK Group, we aim to create innovations at the fields of marine transportation and logistics as infrastructures of the global economy. For this mission, we conduct a variety of research and development projects, often involving open collaboration, in areas such as safe vessel operations, environmental conservation, energy saving, and ITC technologies that support those activities. We also feed the solutions created through our activities back to society.

Business Areas

- Research and development of environmental conservation and energy-saving technology
- Research and development of vessel-operating technology
- Research and development of vessel-operating information technology
- Research, development, and consultation on quality transport
- Research, development, and provision of logistics solutions
- Investigation and research of new businesses, including ocean business
- Earthquake-resistance test and vibration test of transportation equipment and cargo shipping
